Overview

This course teaches participants how to simulate productivity and cost of equipment using RPM's HAULSIM solution. The course teaches students the core functionality of the product through pre-configured simulated workshops that are designed around real-life scenarios. Steps can be replicated within the software where available.

Learning Outcomes

- Learn how to navigate around the software.
- Know how to access product help documentation.
- Create and/or update a mine simulation.
- Learn how to import data into the simulation.
- Understand the equipment database.
- Learn how to use dashboards and reports.
- Analyse impacts of changes to the simulation.

Who is the Course for?

- Mine Scheduling/Planning Engineers
- Mine Manager/Superintendents
- Senior Operations Personnel
- Equipment Manufacturers
- Business Improvement Specialists

Delivery Mode

Online (eLearning)
store.rpmglobal.com

Duration

Approx 5 hrs of learning with access to the course for 12 months.
